

IN THE SPECIFICATION

Please amend page 15, lines 21-25 as follows:

--The acceleration factor F is determined at step E31, for example by reading it from a predetermined memory area, and the number C of pixels to be used is determined at step E32 by the formula:  $C = \text{Int}[K/F]$ , where  $\text{Int}[\dots]$  denotes the integer part. The number C will then be decremented every time pixels are selected.--
